23 April 1962

TATINTL	Discussed security aspect of putting on line with the 490 on 20 April. Since building the electronics, it will be impossible to keep the computer utilization and type Although we would not have to tell the people the exact computer, they could determine it from the information on codes and etc. that we would have to furnish them. This raises the question of how much of the on line detail we can discuss with them without breaking security.
